

PADERBORN UNIVERSITY

FACULTY FOR COMPUTER SCIENCE, ELECTRICAL ENGINEERING AND MATHEMATICS
DEPARTMENT OF ELECTRICAL ENGINEERING AND INFORMATION TECHNOLOGY

MODULE HANDBOOK
MASTER'S PROGRAM COMPUTER ENGINEERING v3 (CEMA v3)

DATE: 6. MÄRZ 2024

Inhaltsverzeichnis

1 Preamble and references	3
2 Compulsory Area	4
3 Specialisation Area	20
3.1 Specialisation Area “Communication and Networks”	20
3.2 Specialisation Area “Computer Systems”	53
3.3 Specialisation Area “Control and Automation”	70
3.4 Specialisation Area “Embedded Systems”	98
3.5 Specialisation Area “Nano/Microelectronics”	124
3.6 Specialisation Area “Signal, Image, and Speech Processing”	144
4 Master’s Thesis	187
5 Overview of the modules offered in the winter semester	189
6 Overview of the modules offered in the summer semester	190
7 Overview of module offerings in English	191

1 Preamble and references

For technical reasons, the preamble of the module manual has been moved. It can be found under Examination Regulations and Module Handbooks under the item “Module Handbooks” on the pages of the Institute EIM-E. We kindly ask you to pay attention to this preamble.

If you have any questions regarding this module handbook or the preamble, please contact either.

- to the Examination Board Computer Engineering,
- to the Computer Engineering Student Advisors,
- to the Electrical Engineering Student Advisor, or
- to the PAUL Electrical Engineering Student Services.

Please also note that

1. this module handbook lists all modules provided according to the examination regulations, even if they are not offered in the corresponding semester.
2. this module manual contains the data of the date of creation. All information is without guarantee.

Learning objectives

Pflichtmodul Informatik I							
Computer Science I							
Module number: M.079.01251		Workload (h): 180		Credits: 6		Regular Cycle: winter term	
		Semester number: beliebig		Duration (in sem.): 1		Teaching Language: en	
1	Module structure:						
		Course	form of teaching	contact-time (h)	self-study (h)	status (C/CE)	group size (TN)
	a)	L.079.05738 Networked Embedded Systems	L3 Ex2	75	105	CE	60/20
2	Options within the module: none						

2 Compulsory Area

3	<p>Admission requirements:</p> <p><i>Prerequisites of course Networked Embedded Systems:</i></p> <p>Recommended Proficiencies System software and system-level programming</p>								
4	<p>Contents:</p> <p><i>Contents of the course Networked Embedded Systems:</i></p> <p>The objective of this course is gain insights into the operation and programming of embedded systems. A strong focus is on wireless sensor networks. We study the fundamentals of such sensor networks. In the scope of the exercises, we discuss selected topics in more detail.</p> <ul style="list-style-type: none"> • Design and architecture of embedded systems - Architecture of embedded systems, programming paradigms • Sensor networks - Principles and applications • Wireless communications - Concepts of modulation and encoding on the physical layer • Wireless access - Typical medium access protocols for low-power sensor nodes • Routing - Ad hoc routing and data centric communication • Cooperation and clustering - Clustering algorithms, guaranteed connectivity 								
5	<p>Learning outcomes and competences:</p> <p>The learning objective is to understand the fundamental concepts of networked embedded systems. Students understand these concepts and are able to apply this knowledge.</p> <p>Non-cognitive Skills</p> <ul style="list-style-type: none"> • Commitment • Learning competence 								
6	<p>Assessments:</p> <p><input checked="" type="checkbox"/>Final module exam (MAP) <input type="checkbox"/>Module exam (MP) <input type="checkbox"/>Partial module exams (MTP)</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 10%;">zu</th> <th style="width: 45%;">Type of examination</th> <th style="width: 20%;">Duration or scope</th> <th style="width: 25%;">Weighting for the module grade</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">a)</td> <td>Written or oral examination</td> <td>90-120 minutes or 40 minutes</td> <td>100%</td> </tr> </tbody> </table> <p>The responsible lecturer announces type and duration of assessment modalities in the first three weeks of the lecture period at latest.</p>	zu	Type of examination	Duration or scope	Weighting for the module grade	a)	Written or oral examination	90-120 minutes or 40 minutes	100%

2 Compulsory Area

2	<p>Options within the module:</p> <p>1 of 2</p>
3	<p>Admission requirements:</p> <p>None</p> <p><i>Prerequisites of course Verarbeitung statistischer Signale:</i> Recommended: Basic knowledge of statistical signal description as learned in a bachelor's degree program in electrical engineering or related disciplines.</p> <p><i>Prerequisites of course Statistical Signal Processing:</i> Recommended: Undergraduate courses in signal processing and probability</p>
4	<p>Contents:</p> <p><i>Contents of the course Verarbeitung statistischer Signale:</i> Short description With the course Processing of Statistical Signals, students gain an understanding of the importance of descriptive and inferential statistics for many areas of electrical engineering. They consolidate their basic knowledge of probability calculus and statistics and gain an insight into estimation and detection theory, as well as statistical time series analysis. In addition, procedures are presented with the help of which estimated values obtained from data can be evaluated with regard to statistical significance. Knowledge of detection and estimation theory, as well as time series analysis, and critical evaluation of experimental results are essential for understanding and critically applying modern signal processing techniques.</p> <p>Contents</p> <ul style="list-style-type: none"> • Random experiment, axiomatic notion of probability. • Concept of random variables, distribution function, important distributions of discrete and continuous random variables, random variable transformation. • Maximum likelihood parameter estimation, linear estimators, quality assessment of estimators, Cramer-Rao bound. • Bayesian estimation, (L)MMSE estimation, special case Gaussian distribution • Stochastic processes, stationarity, ergodicity, correlation function and power density spectrum, white noise, Markov chains • Optimal filter according to Wiener, autoregressive processes • Maximum-a-Posteriori and Neyman-Pearson decision rule, receiver operating characteristic, statistical hypothesis tests <p><i>Contents of the course Statistical Signal Processing:</i> Short Description Statistical signal processing comprises the techniques that engineers and statisticians use to draw inference from imperfect and incomplete measurements. This course covers a selection of topics from the major domains of detection, estimation, and time series analysis.</p> <p>Contents Topics that may be covered in this course include correlation analysis, linear minimum mean-squared error estimation, performance bounds for parameter estimation, Neyman-Pearson detectors, wide-sense stationary, nonstationary and cyclostationary time series, and complex-valued random signals.</p>
5	<p>Learning outcomes and competences:</p> <p>-</p>

Pflichtmodul Elektrotechnik II			
Compulsory Module Electrical Engineering II			
Module number: M.048.45002	Workload (h): 180	Credits: 6	Regular Cycle: winter term
	Semester number: 1. Semester	Duration (in sem.): 1	Teaching Language: en

2 Compulsory Area

1	Module structure:						
	Course	form of teaching	contact-time (h)	self-study (h)	status (C/CE)	group size (TN)	
	a) L.048.90100 Circuit and Systems Design	2L 2Ex, WS	60	120	C	30/30	
2	Options within the module: None						
3	Admission requirements: None <i>Prerequisites of course Circuit and Systems Design:</i> Recommended: Good knowledge in differential equations, Laplace transform, Fourier transform, electrical network analysis (Kirchhoff's laws, Norton equivalent, Thevenin equivalent, transfer functions, Bode diagram etc.), semiconductor device physics (band diagram, conduction mechanisms in semiconductors, minority and majority charge carriers, n-type, p-type semiconductor, physics of pn junction, physics of MOS capacitance), semiconductor devices (physical operation and device equations of pn-diode, MOS transistor, and bipolar transistor), basic digital design (boolean algebra, truth tables, combinational logic)						
4	Contents: <i>Contents of the course Circuit and Systems Design:</i> Short Description The lecture gives an introduction to analysis and design of analog and digital circuits and systems. It builds on basic knowledge of electron devices (bachelor-level) and the compulsory lectures "Advanced System Theory" and "Modeling and Simulation". The lecture presents a modern approach for analysis and design of electronic circuits and system which combines mathematical analysis and circuit simulation. Contents						
	<ul style="list-style-type: none"> • Nonlinear, large-signal modeling of pn diode, bipolar junction transistor (BJT), and MOS transistor • Nonlinear, large-signal analysis of circuits with diodes, BJTs, MOS transistors • Linear modeling and one-/two-port representations of diodes, transistors, and amplifiers • Linear small-signal analysis of BJT and MOS transistor amplifiers • Single-transistor amplifier analysis • Differential amplifier analysis • Modeling and analysis of operational amplifier circuits • CMOS logic • Analysis and design of combinational logic circuits • Analysis and design of sequential logic circuits • Application examples 						

2 Compulsory Area

5	<p>Learning outcomes and competences:</p> <p>Domain competence: The students will be able to</p> <ul style="list-style-type: none"> • describe appropriate methods for analysis and design of analog systems • describe appropriate methods for analysis and design of digital systems • assess the limitations of the different methods • understand and calculate the behaviour of simple analog and digital circuits • use a numeric simulation tool for electronic systems and circuit simulation • describe typical components and subsystems <p>Key qualifications: The lecture conveys an understanding of the interaction of different modeling techniques, mathematical analysis approaches, and numerical simulation, as well as how to apply these effectively to the design of electronic systems. The methods for analog electronic design are transferrable to the design of continuous-time, continuous-amplitude systems. The methods for digital design are transferrable to the design of discrete-time, discrete-amplitude systems.</p>

	Recommended Proficiencies					
	Depending on the topic.					

2 Compulsory Area

4	<p>Contents:</p> <p><i>Contents of the course Projektgruppe:</i></p> <p>In a project group a group of usually 8-16 students works together over a period of one year (two semesters) on a research topic determined by the group organizer. Project groups introduce students to current research topics that are usually related to the group organizer's special area of interest and the team working of the project group should be a preparation for industrial practice. Topics of project groups cover the whole range of research interests of the research groups in the Department of Computer Science.</p>								
5	<p>Learning outcomes and competences:</p> <p>In project groups, participating students gain first-hand practical experience in working in a team and organizing a project; in doing so, they become prepared for daily work in their later professions. The students personally experience how to carry out extensive development processes in a team. Since the tasks are divided among the individual team members, the participating students become skilled in reporting their progress and research findings to the other group members.</p> <p>Non-cognitive Skills</p> <ul style="list-style-type: none"> • Commitment • Team work • Learning competence • Learning motivation • Motivation • Literacy (scientific) • Self-monitoring 								
6	<p>Assessments:</p> <p><input checked="" type="checkbox"/>Final module exam (MAP) <input type="checkbox"/>Module exam (MP) <input type="checkbox"/>Partial module exams (MTP)</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: center;">zu</th> <th style="text-align: center;">Type of examination</th> <th style="text-align: center;">Duration or scope</th> <th style="text-align: center;">Weighting for the module grade</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">a)</td> <td>Partial Module Exam</td> <td></td> <td style="text-align: center;">100%</td> </tr> </tbody> </table> <p>In the Project Group module, the successful completion of projects must be demonstrated by submitting software and documentation as a phase-related examination. A grade is awarded for the entirety of the projects worked on. The responsible lecturer announces type and duration of assessment modalities in the first three weeks of the lecture period at latest.</p>	zu	Type of examination	Duration or scope	Weighting for the module grade	a)	Partial Module Exam		100%

b)			
<p>Qualified participation in the course a) of the module according to § 39 Special Regulations. Details on the form and scope or duration will be announced by the instructor within the first three weeks of the lecture period at the latest.</p>			
8	Prerequisites for participation in examinations:		
None			
9	Prerequisites for assigning credits:		
The credit points are awarded after passing the module examination (MAP) and providing proof of the qualified participation.			
10	Weighing for overall grade:		
The module is weighted according to the number of credits (factor 1).			
11	Reuse in degree courses or degree course versions :		
Masterstudiengang Computer Engineering v3 (CEMA v3), Masterstudiengang Computer Engineering v4 (CEMA v4)			
12	Module coordinator:		
Prof. Dr.-Ing. Katrin Temmen			

2 Compulsory Area

13	<p>Other Notes:</p> <p><i>Remarks of course Sprachen, Schreib- und Präsentationstechnik:</i> Registration Note: For the course “Languages, Writing and Presentation Techniques”, please proceed as follows for pragmatic reasons: Select a course from the overall university course program matching the conditions specified in the module handbook, obtain a written confirmation of your successful participation and pass this proof on to me (letterbox next to room P1.6.09.2 or pdf-file to Katrin.Temmen@upb.de) before start of</p> <ul style="list-style-type: none">• Winter semester: by 31 March or• Summer semester: by 30 September. I will then have this registered in PAUL. Please ensure that besides your matriculation number the respective module (Bachelor v2: L.048.90802 / M.079.0116; Bachelor v3 & v3b: L.048.90802 / M.079.01209; Master v3: L.048.90801 / M.048.42941) is also mentioned on the proof of registration. Katrin Temmen <p><i>Remarks of course Seminar (CE):</i> Implementation method Seminars are based on a list of given topics from which students can make a selection. After a topic is assigned, there are usually a few appointments to discuss literature research, literature selection, presentation technique, technical writing, etc. At the same time, students begin the literature search. In constant interaction with the supervisor and the other seminar participants, a seminar paper and a presentation are developed through some milestones, which are then presented to the group and discussed.</p> <p>Learning Material, Literature Scientific publications.</p>

	a) L.048.25017 Integrated Circuits for Wireless Communications	2L 2Ex, SS	60	120	C	40/40
2	Options within the module: None					
3	Admission requirements: None <i>Prerequisites of course Integrierte Schaltungen für die drahtlose Kommunikation:</i> Recommended: Lecture Schaltungstechnik resp. Circuit and System Design. Helpful supplement: Lecture "Wireless Communications" of Prof. Hab-Umbach.					

3 Specialisation Area

4	<p>Contents:</p> <p><i>Contents of the course Integrierte Schaltungen für die drahtlose Kommunikation:</i></p> <p>Short Description</p> <p>Mobile communications, wireless networks, and RFID technology are application examples of wireless communications. Wireless communications has found widespread use in everyday life and will become even more important in the future. The design of electronic circuits for radio frequencies requires a good system knowledge with respect to typical transmitter and receiver architectures in wireless communications, components, and radio signal properties. Furthermore a thorough understanding of integrated circuit design as well as precise high-frequency modeling of passive and active devices are required. Goal of the lecture is to convey a methodical approach to the design of integrated circuits for wireless communications. A part of the exercises will pertain to calculation of circuit design problems another will be performed in small teams as a hands-on exercise using modern IC design software.</p> <p>Contents</p> <p>The lecture deals with analysis and design of radio frequency integrated circuits for wireless communication systems. A part of the exercises will be performed using modern chip design CAD tools. The lecture is based on the compulsory lectures “Schaltungstechnik” resp. “Circuit and System Design”. The following topics will be addressed:</p> <ul style="list-style-type: none"> • Transmitter and receiver architectures for wireless communications • System Theory Basics <ul style="list-style-type: none"> – Signals and noise – Modulation and demodulation – Transmission properties of wireless communications systems • Semiconductor technologies and integrated high-frequency devices • Amplifiers (low-noise and variable-gain amplifiers) • Mixers • Oscillators • Frequency synthesizer PLLs 								
5	<p>Learning outcomes and competences:</p> <p>The students will be able</p> <ul style="list-style-type: none"> • to describe architectures and circuits of wireless communication systems • to describe and calculate fundamental signal transmission properties of wireless systems • to apply design methods to design components of radio frequency ICs 								
6	<p>Assessments:</p> <p> <input checked="" type="checkbox"/> Final module exam (MAP) <input type="checkbox"/> Module exam (MP) <input type="checkbox"/> Partial module exams (MTP) </p> <table border="1" style="width: 100%; border-collapse: collapse; margin-top: 5px;"> <thead> <tr> <th style="width: 10%; text-align: center;">zu</th> <th style="width: 45%; text-align: center;">Type of examination</th> <th style="width: 20%; text-align: center;">Duration or scope</th> <th style="width: 25%; text-align: center;">Weighting for the module grade</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">a)</td> <td>Oral Examination</td> <td style="text-align: center;">30-45 min</td> <td style="text-align: center;">100%</td> </tr> </tbody> </table>	zu	Type of examination	Duration or scope	Weighting for the module grade	a)	Oral Examination	30-45 min	100%

2	Options within the module: none						
3	Admission requirements: <i>Prerequisites of course Machine Learning I:</i> Recommended Proficiencies Basic knowledge in mathematics (linear algebra, statistics), programming and algorithms.						
4	Contents: <i>Contents of the course Machine Learning I:</i> Due to the ever increasing amount of data that is routinely produced in our information society, the topic of machine learning has become increasingly important in the recent years, not only as a scientific discipline but also as a key technology of modern software and intelligent systems. This lecture provides an introduction to the topic of machine learning, with a specific focus on supervised learning for classification and regression. The lecture covers theoretical foundations of generalisation as well as practical topics and concrete learning algorithms. <ul style="list-style-type: none"> • Introduction • The Learning Problem • Training versus Testing • The Linear Model • Non-Linear Methods • Overfitting 						
5	Learning outcomes and competences: The students understand the statistical foundations of generalisation, i.e., the induction of models from data, as well as practical tools for model validation. They are able to apply basic methods of supervised learning to problems of classification and regression. Non-cognitive Skills <ul style="list-style-type: none"> • Learning competence • Learning motivation • Literacy (scientific)

4	<p>Contents:</p> <p><i>Contents of the course Optimale und Adaptive Filter:</i></p> <p>Short Description</p> <p>The course “Optimal and adaptive filters” gives an introduction to the basic techniques and theories of adaptive filters. Based upon the basics of estimation theory optimal filters are discussed. Subsequently the topics Wiener filter theory, deterministic optimization under constraints and stochastic gradient methods are regarded. Concluding the Least Squares approach for solving filter tasks and the Kalman filter are introduced. The latter is regarded as a brief introduction to state based filters.</p> <p>Contents</p> <ul style="list-style-type: none">• Classic parameter estimation• Estimators• MMSE-Estimation• Linear estimators• Orthogonality principle• Evaluation of estimators• Wiener filter• Wiener-Hopf equation• AR- and MA processes• Linear prediction• Iterative optimization methods• Gradient ascent/descent• Newton method• Linear adaptive filters• LMS algorithm• Least-Squares method• Blockwise and recursive adaptiv filters• Realization aspects• Statemodel based filters• Kalman filter• Applications• System identification• Channel estimation and equalization• Multi-channel speech signal processing• Noise and interference suppression

4	Contents:						
	<p><i>Contents of the course Real World Crypto Engineering:</i></p> <p>Strong cryptography is not always sufficient to protect primary security goals. Even if strong cryptographic algorithms are used, a lot can go wrong when they are implemented. This lecture will dive into the most important protocols and cryptographic protection mechanisms (e.g., TLS, SSH, WPA) and show their basic concepts. Then, we will present prominent attacks that ultimately break the desired security goals. Based on many cases, we will learn what is essential when designing and implementing cryptographic applications.</p>						

3 Specialisation Area

5	<p>Learning outcomes and competences:</p> <p>Upon successful completion, students have a comprehensive understanding of the technical aspects of applied cryptographic algorithms. They have recognized that cryptography alone is not sufficient to solve security-related problems. They have an overview of current cryptographic attacks and know how to practically prevent them.</p> <p>Non-cognitive Skills</p> <ul style="list-style-type: none"> • Team work • Literacy (scientific)

3 Specialisation Area

4	<p>Contents:</p> <p><i>Contents of the course Schnelle integrierte Schaltungen für die leitungsgebundene Kommunikation:</i></p> <p>Short Description</p> <p>Nowadays commercial fiber-optic communication systems reach very high data rates of 100 Gb/s per optical channel and several Tb/s in a single fiber. In a similar way very high data rates of more than 10 Gb/s occur at a single package pin of electronic chips. These signals are to be transmitted over printed circuit boards and inexpensive serial cables. In the future the progress of CMOS technology and communication technology will push speed of fiber-optic and wire-line communication continuously to ever higher data rates. The design of electronic circuits for high bandwidth resp. data rates requires a good system knowledge with respect to typical transmitter and receiver architectures, components, and signal properties. Furthermore a thorough understanding of integrated circuit design as well as precise high-frequency modeling of passive and active devices are required. Goal of the lecture is to enable the student to utilize a methodological approach for the design of fast integrated electronic circuits for digital wired communications. A part of the exercises will be carried out using modern industry-standard IC design software.</p> <p>Contents</p> <p>The lecture deals with analysis and design of fast integrated electronic circuits for digital broadband communication systems. A part of the exercises will be performed using modern chip design CAD tools. The lecture is based on the compulsory lectures "Schaltungstechnik" resp. "Circuit and System Design". The lecture deals with:</p> <ul style="list-style-type: none">• Transmitter and receiver architectures for fiber-optic communications• Transmitter and receiver architectures for chip-to-chip communications• System design• Semiconductor technology and integrated high-frequency devices• Broadband amplifiers• Current-mode logic• Transmitter and receiver circuits• PLLs for frequency synthesis and clock recovery• Measurement methods
5	<p>Learning outcomes and competences:</p> <p>Domain competence:</p> <p>The student will be able to:</p> <ul style="list-style-type: none">• describe and analyze transmitter and receiver architectures for broadband communication links• understand and describe semiconductor technologies and integrated high-frequency devices for broadband circuits• to analyze circuit design techniques for transmitter and receiver circuits and describe ways to optimize them• to describe circuits in PLL technique for frequency synthesis and clock recovery• to describe measurement methods <p>Key qualifications:</p> <p>The students will learn how different interdisciplinary scientific domains and their methods - like mathematical signal and system analysis, non-linear and linear circuit analysis, semiconductor physics, semiconductor devices and high-frequency engineering - are applied together for the development of communications application.</p>

4	Contents: <i>Contents of the course Topics in Signal Processing:</i> Short Description This course covers a selection of current topics in signal processing. One part of this course will follow a regular lecture format, while the other part will require active student participation. Contents This course will first review relevant aspects of linear algebra and probability theory. Then students will learn how to read, analyze, and present recent papers from the signal processing literature.					
5	Learning outcomes and competences: In this course, students will familiarize themselves with some current research topics in signal processing. They will learn to read and understand scientific publications and to critically evaluate results. Students will develop confidence in their ability to solve mathematical problems of analysis and design. They will be able to apply the principles they have learnt in this course to other areas.

4	<p>Contents:</p> <p><i>Contents of the course Web Security:</i></p> <p>Modern web applications and web services usually consist of multiple layers. They are based on different (often complex) technologies that are constantly being developed. Their complexity is often the reason for new types of attacks that can be observed on the web every day.</p> <p>In this lecture, we will focus on the most important technologies and learn what you have to consider while securing your web applications. We will introduce prominent and widespread attacks and show how to prevent them. These range from typical attacks from the OWASP Top 10 list, such as XSS or SQL Injection, to attacks on web services and Single Sign-On standards (e.g., on SAML and OpenID Connect). Based on many cases, we will learn what is important in the design and implementation of secure web applications.</p>								
5	<p>Learning outcomes and competences:</p> <p>After successful completion, students have a comprehensive understanding of the technical aspects of web applications, web services, and various authentication mechanisms. They have learned that the web technologies used today are complex and that their complexity poses many security problems. Students have an overview of current web attacks and know how to prevent them practically.</p> <p>Non-cognitive Skills</p> <ul style="list-style-type: none"> • Team work • Literacy (scientific)

	<i>Prerequisites of course Wireless Communications:</i>						
	Recommended: Some basic knowledge in digital communication systems.						

3 Specialisation Area

4	<p>Contents:</p> <p><i>Contents of the course Wireless Communications:</i></p> <p>The course provides students with an insight into the techniques for reliable communication via time and/or frequency selective radio channels. To this end, the physical and statistical modeling of the radio channel is first presented, which forms the basis for understanding the transmission methods adapted to these channel conditions. Then, the main transmission and reception principles are presented, in particular the different diversity schemes:</p> <ul style="list-style-type: none">• Time diversity: maximum ratio combiner, error rate calculation for coherent and incoherent reception, interleaving.• Antenna diversity: SIMO, MISO and MIMO techniques• Frequency diversity for frequency selective channels: Single-carrier techniques with sequence detection, band-spreading techniques, multicarrier transmission. <p>Emphasis will be placed on an illustrative derivation of the receiver principles as operations in a linear vector space. In addition, an insight into current cellular radio communication systems is given.</p> <p>Table of contents</p> <ul style="list-style-type: none">• Pulse amplitude modulation and orthogonal multi-pulse modulation• Optimal detection• Channel models for mobile radio• Treatment of intersymbol interference• Error rate on frequency nonselective Rayleigh Fading channel• Diversity schemes: time, space, and frequency diversity• Channel coding• Cellular systems

3.2 Specialisation Area “Computer Systems”

Specialisation Area	Computer Systems
Modules	<ul style="list-style-type: none"> * Algorithms and Tools for Test and Diagnosis of Systems on a Chip * Databases and Information Systems * Introduction to Quantum Computation * Machine Learning I * Reconfigurable Computing * Usable Security and Privacy * VLSI Testing
Catalogue advisor	Hellebrand, Sybille, Prof. Dr.
Credits ECTS	6
Learning objectives	

3 Specialisation Area

The modules from this specialisation area enable specialisation in the field of computer systems. The focus is on the analysis and evaluation of computer architectures, systematic methods for the design and optimisation of computer systems, in particular the interaction of hardware and software, as well as programming models and methods for the parallel and specialised computer architectures that are gaining strongly in importance.

Algorithms and Tools for Test and Diagnosis of Systems on a Chip

Databases and Information Systems			
Databases and Information Systems			
Module number: M.079.01260	Workload (h): 180	Credits: 6	Regular Cycle: winter term
	Semester number: beliebig	Duration (in sem.): 1	Teaching Language: en

3 Specialisation Area

1	Module structure:						
	Course	form of teaching	contact-time (h)	self-study (h)	status (C/CE)	group size (TN)	
	a) L.079.05532 Databases and Information Systems	L3 Ex2	75	105	CE	120/30	
2	Options within the module: none						
3	Admission requirements: <i>Prerequisites of course Databases and Information Systems:</i> Recommended Proficiencies Students are required to have previous knowledge of relational database systems and SQL comparable to the course “Datenbanksysteme” and programming knowledge and skills comparable to the courses “Programming” and “Grundlagen der Programmiersprachen”.						
4	Contents: <i>Contents of the course Databases and Information Systems:</i> Data storage and data management play a central role in enterprises since a large part of the companies’ knowledge is stored as data. Furthermore, data collections are rapidly growing, and an efficient processing of these big data collections requires know how beyond that of SQL and traditional database systems. Examples for these big data collections are genome databases, text document collections, sensor data, satellite data, data from cameras, microphones, and RFID tags, telecommunication data, weather data, finance data, news readers, data from messengers, etc.. To develop applications or information systems that lead to acceptable response times on these big data collections requires knowledge about non-standard data models, main-memory databases, compression, indexing of big data, and efficient search in these data collections. This module focusses on algorithms for compression and for efficient processing of complex structured massive data, including text data, genome data, tree structured data, and graph data. The content of this module covers: <ul style="list-style-type: none"> • Overview of search engines and information systems • Main memory databases and succinct encoding techniques • String compression algorithms • Genome databases • Processing of huge tree data collections (XML and JSON) and tree compression • Graph databases and graph compression • Search Algorithms for Big Data and for data streams 						

3 Specialisation Area

5	<p>Learning outcomes and competences:</p> <p>After completing the module students can comprehend, design, implement and assess (with respect to time and space complexity) XML processing in software systems. They know pivotal search and query techniques to acquire information in uncompressed and compressed XML data. They can appropriately process infinite data streams. They can acquire new research results from scientific publications.</p> <p>Non-cognitive Skills:</p> <ul style="list-style-type: none"> • Team work • Learning competence • Learning motivation

2	Options within the module: none					
3	Admission requirements: none					

3 Specialisation Area

4	<p>Contents:</p> <p><i>Contents of the course Usable Security and Privacy:</i></p> <p>Human factors and usability issues have traditionally played a limited role in security research and secure systems development. Usability issues have been largely disregarded by security experts due to their failure to acknowledge their significance and their insufficient knowledge to tackle them. Today there is consensus on the importance of understanding users behavior and improving usability to achieve true security. This course provides practical and research-oriented knowledge about usable security and privacy. Students will gain practical experience through focused presence exercises and work in small teams to conduct a semester-wide research project with the goal of designing and pretesting a user study on human-centered security and privacy. For that, the course will present research methods and give an introduction into HCI and usability concepts. The course will also address foundational and state-of-the-art research topics in the area, such as privacy and transparency enhancing tools, usable authentication, and developer-centered security. By reviewing relevant papers and giving presentations, the students will get familiar with the latest research in the field and gain knowledge about how to work scientifically. The course includes the following contents:</p> <ul style="list-style-type: none">• Security and privacy concepts• Foundations of cryptography• Privacy and transparency enhancing tools• HCI and usability research methods• Ethics in technology• Quantitative and qualitative data analysis• Usable authentication• Usable privacy• Developer-centered security
5	<p>Learning outcomes and competences:</p> <p>Participants of the course</p> <ul style="list-style-type: none">• gain an appreciation for the importance of usable security and privacy• learn about the history of the field and main research areas and challenges• are able to apply methodologies to conduct user research in security and privacy <p>Non-cognitive Skills</p> <ul style="list-style-type: none">• Literacy (scientific)• Self-monitoring• Team work

2	Options within the module:					
	None					
3	Admission requirements:					
	None					
	<i>Prerequisites of course Advanced System Theory:</i>					
	Recommended:					
	Prerequisites are a basic understanding of differential equations, linear algebra, and Laplace transforms, as they are covered in a typical undergraduate course on system theory.					

3 Specialisation Area

4	<p>Contents:</p> <p><i>Contents of the course Advanced System Theory:</i></p> <p>Short Description Building on an undergraduate system theory course, this course studies the dynamical behavior of linear systems with greater mathematical rigor. The course is primarily intended to serve students in engineering, but it can also be useful to students in physics and other natural sciences.</p> <p>Contents</p> <ul style="list-style-type: none"> • System models and differential equations • State-space and I/O descriptions • Relations between internal and external descriptions • Response of continuous- and discrete-time systems • Stability, controllability, observability • State-space realizations of external descriptions • Feedback systems 								
5	<p>Learning outcomes and competences:</p> <p>After attending this course, students will be familiar with the most important concepts and results in linear system theory. Students will develop confidence in their ability to solve mathematical problems of analysis and design. Many of their timeless insights and intuitions about the dynamical behavior of systems will be drawn from this course. This course presents material broad enough so that students will have a clear understanding of the dynamical behavior of linear systems, including their power and limitations. This will allow students to apply the theory to other fields.</p>								
6	<p>Assessments:</p> <p><input checked="" type="checkbox"/>Final module exam (MAP) <input type="checkbox"/>Module exam (MP) <input type="checkbox"/>Partial module exams (MTP)</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: center;">zu</th> <th style="text-align: center;">Type of examination</th> <th style="text-align: center;">Duration or scope</th> <th style="text-align: center;">Weighting for the module grade</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">a)</td> <td>Written or Oral Examination or Presentation</td> <td>120-180 min or 30-45 min or 30 min</td> <td style="text-align: center;">100%</td> </tr> </tbody> </table>	zu	Type of examination	Duration or scope	Weighting for the module grade	a)	Written or Oral Examination or Presentation	120-180 min or 30-45 min or 30 min	100%

2	<p>Options within the module:</p> <p>None</p>
3	<p>Admission requirements:</p> <p>None</p> <p><i>Prerequisites of course Data Science for Dynamical Systems:</i></p> <p>None</p>
4	<p>Contents:</p> <p><i>Contents of the course Data Science for Dynamical Systems:</i></p> <p>This course has a modular structure and is offered in an interdisciplinary way for different degree programs and faculties. Depending on the available prior knowledge of the participants, the content will be tailored to the specific degree program. Overarching core topics include</p> <ul style="list-style-type: none"> • Basics of modelling dynamic systems using differential and difference equation models • Data-driven identification methods for linear models on the basis of the least squares approach • Data-driven identification methods for non-linear models (e.g., artificial neural networks) • Learning of data-driven models utilizing a priori system knowledge • Identification of underlying model structure equations (topology selection), e.g., by means of regularization or hypothesis tests with regard to competing objectives • (Data-driven) model reduction • Manipulation of the available model input data (dimensionality reduction and augmentation methods), e.g., autoencoders, principal component analysis and kernel methods • Statistical evaluation of the available input and output data of dynamic systems as well as corresponding procedures for system excitation • Statistical evaluation of the achieved model quality (over-fitting vs. under-fitting) by means of cross-validation <p>In addition to obtain new methodological knowledge, extensive programming and simulation exercises are developed using modern software programs (especially in the programming language Julia). Diverse application examples from the practice of various domains (e.g., engineering, natural sciences and economics) round off the course.</p>
5	<p>Learning outcomes and competences:</p> <p>After completing the course, the participants are able to</p> <ul style="list-style-type: none"> • describe and apply methods for the identification of dynamic systems, • critically evaluate identification results, • to understand and analyze complex data-driven modelling tasks in interdisciplinary teams, to derive target-oriented solution methods and to evaluate independently developed results.

Machine Learning I			
Machine Learning I			
Module number: M.079.01274	Workload (h): 180	Credits: 6	Regular Cycle: winter term
	Semester number: beliebig	Duration (in sem.): 1	Teaching Language: en

3 Specialisation Area

1	Module structure:						
	Course	form of teaching	contact-time (h)	self-study (h)	status (C/CE)	group size (TN)	
	a) L.079.05717 Machine Learning I	L3 Ex2	75	105	CE	60/20	
2	Options within the module: none						
3	Admission requirements: <i>Prerequisites of course Machine Learning I:</i> Recommended Proficiencies Basic knowledge in mathematics (linear algebra, statistics), programming and algorithms.						
4	Contents: <i>Contents of the course Machine Learning I:</i> Due to the ever increasing amount of data that is routinely produced in our information society, the topic of machine learning has become increasingly important in the recent years, not only as a scientific discipline but also as a key technology of modern software and intelligent systems. This lecture provides an introduction to the topic of machine learning, with a specific focus on supervised learning for classification and regression. The lecture covers theoretical foundations of generalisation as well as practical topics and concrete learning algorithms. <ul style="list-style-type: none"> • Introduction • The Learning Problem • Training versus Testing • The Linear Model • Non-Linear Methods • Overfitting 						
5	Learning outcomes and competences: The students understand the statistical foundations of generalisation, i.e., the induction of models from data, as well as practical tools for model validation. They are able to apply basic methods of supervised learning to problems of classification and regression. Non-cognitive Skills <ul style="list-style-type: none"> • Learning competence • Learning motivation • Literacy (scientific)

Reinforcement Learning			
Reinforcement Learning			
Module number: M.048.92045	Workload (h): 180	Credits: 6	Regular Cycle: summer term

3 Specialisation Area

	Semester number: 1.-3. Semester	Duration (in sem.): 1	Teaching Language: en			
1	Module structure:					
	Course	form of teaching	contact-time (h)	self-study (h)	status (C/CE)	group size (TN)
	a) L.048.92045 Reinforcement Learning	2L 2Ex, SS	60	120	C	30/30
2	Options within the module: None					
3	Admission requirements: None <i>Prerequisites of course Reinforcement Learning:</i> Recommended: It is recommended to have a sound basic knowledge in the field of system and control theory. Ideally, the students have knowledge in the field of un-/supervised machine learning and numerical optimization. In addition, at least some experience with Python will be advantageous for the exercise and tutorial tasks.					
4	Contents: <i>Contents of the course Reinforcement Learning:</i> The course covers the basics of reinforcement learning (RL) in an engineering context. RL stands for a series of methods of machine learning in which an agent independently learns a strategy (policy) to maximize the rewards received during interaction with an (unknown) system. This can be, for example, a control loop in which an adaptive controller tries to determine an optimal control law from previous observations of the control and measurement variables, which maximizes certain benchmark criteria with regard to controller performance. Well-known fields of application include the operation of autonomous vehicles and industrial robots or the identification of optimal strategies in the context of leisure games. The course has an application-oriented focus in the engineering sciences but is also designed for students of natural sciences (e.g. computer science, mathematics). In addition to teaching the methodological fundamentals within the lecture, great importance is attached to practical implementation and programming tasks during the exercise and tutorial hours. The course will cover the following content: <ul style="list-style-type: none"> • Conceptual basics and historical overview • Markov decision processes • Dynamic programming • Monte Carlo learning • Temporal difference learning • Bootstrapping • Function approximation and deep learning • On- and Off-policy strategies • Policy gradient methods • Trust region methods 					

3 Specialisation Area

5	<p>Learning outcomes and competences:</p> <p>Domain-specific competences After attending the course, the students are able to</p> <ul style="list-style-type: none"> • differentiate, apply and analyze RL methods, • name and explain differences as well as advantages and disadvantages of RL compared to neighboring approaches (e.g. model-predictive control), • educate themselves independently in this branch of science on the basis of the methods learned for the analysis and synthesis of RL techniques. <p>Interdisciplinary competences The students</p> <ul style="list-style-type: none"> • can apply or transfer the acquired knowledge to interdisciplinary problems, • have gained practical experience in programming which they can use across domains and • are able to critically evaluate methods and results.

3 Specialisation Area

4	<p>Contents:</p> <p><i>Contents of the course Systemidentifikation:</i></p> <p>Short Description</p> <p>The course deals with the experimental identification of quantitative models describing the behavior of a given system. This includes both the selection of the model class, the determination of the parameters of the model and, if necessary, the state estimation. Depending on the field of application, a variety of model properties and, as a result, identification techniques can be distinguished: static vs. dynamic, deterministic vs. stochastic, discrete-time vs. continuous-time etc. The course gives an introduction to the most important methods of system identification, whereby the application-oriented realization (also with the use of software tools) is focused.</p> <p>Contents</p> <ul style="list-style-type: none"> • Introduction: Application fields of system identification and basic terms • Repetition of basics: Dynamic models in state space, time discretization, stochastic processes • Identification of deterministic, static processes (function fitting) • Systematic evaluation of the identification results (accuracy analysis) • Numerical optimization methods for (non-)linear problems • Identification of dynamic processes in the state space by means of iterative optimization • State and parameter estimation using Kalman filtering • Practical aspects of implementation (e.g. optimal system excitation) 								
5	<p>Learning outcomes and competences:</p> <p>Domain competence:</p> <p>After attending this course, students will be able to:</p> <ul style="list-style-type: none"> • Explain system theoretic model classes / properties and distinguish them from each other. • Independently select, apply and, if necessary, adapt problem-specific solution methods for system identification. • Evaluate identification results and deduce whether the chosen solution has been effective or may need to be modified. <p>Key qualifications:</p> <p>The students</p> <ul style="list-style-type: none"> • are able to apply system identification methods to (interdisciplinary) problems from different science domains (e.g. within electrical engineering, mechanical engineering or economics). • can empirically determine and interpret mathematical models of complex systems (abstraction ability). • can apply and develop software-based engineering tools. • are able to familiarize themselves with adjacent and further topics.

4	Contents: <i>Contents of the course Ultraschallmesstechnik:</i> Short description The course Ultrasonic Measurement Technology deals with the phenomena of propagation of mechanical waves in solids, liquids and gases. Based on this the most important acoustic measurement principles for the determination of acoustic material parameters, geometric and technical process parameters as well as their application in process and production engineering are described. The application of sound and ultrasound for non-destructive material diagnostics as well as for ultrasonic tomography are covered in detail. Contents The Ultrasonic Metrology lecture covers the following topics: <ul style="list-style-type: none"> • Acoustic and sound field characteristics. • Fundamentals of wave propagation • Ultrasonic sensor design (experimental realization) • Methods for measurement and visualization of ultrasonic fields (needle and membrane hydrophone, schlieren measuring station, laser vibrometry. . .) • Metrological methods for acoustic material data determination (sound velocity, sound characteristic impedance. . .) • Application of ultrasound for non-destructive testing (NDT) and acoustic emission analysis • Application of ultrasound and in process measurement technology (distance, flow, level. . .) 						

3 Specialisation Area

4	<p>Contents:</p> <p><i>Contents of the course Advanced VLSI Design:</i></p> <p>Short Description</p> <p>The course provides basic knowledge about the modern application-oriented modeling, simulation, analysis, and synthesis of digital systems at different abstraction levels to chip layout.</p> <p>Contents</p> <p>In today's practice, chip design consists of the combined application of various languages, methods, and tools for the modeling, simulation, and synthesis of electronic circuits. Along the modern abstraction-based design flow of digital systems (electronic system level to chip layout), the course provides basic knowledge of the main description languages and their application in modeling, simulation, analysis and synthesis. This includes basic principles and application of the IEEE standard system/hardware description languages SystemVerilog, SystemC, Verilog, and VHDL, in conjunction with additional formats, e.g., SDF and UPF for time and power annotation. For their application, the fundamental principles of test environments for simulation, timing and power analysis, logic synthesis and physical design of digital circuits. Exercises will provide hands-on labs based on commercial tools from Mentor Graphics, Synopsys and, Cadence Design Systems.</p>										
5	<p>Learning outcomes and competences:</p> <p>Domain competence:</p> <p>After the course students are able</p> <ul style="list-style-type: none"> • to model, simulate, analyze and synthesize simple digital circuits at different abstraction levels and • to apply the most important commercial tools for simulation, analysis and synthesis of digital circuits. <p>Key qualifications:</p> <p>After the course students are able</p> <ul style="list-style-type: none"> • to assess, select and apply modern digital circuit description languages for their different applications, • apply the different methods and tools in the modern VLSI design.

3 Specialisation Area

5	<p>Learning outcomes and competences:</p> <ul style="list-style-type: none"> • Students name and explain programming paradigms of parallel programming languages. They master basic constructions of the languages and library functions of the most important parallel programming languages and environments (e.g. OpenMP, POSIX-Threads, MPI, PGAS) and name the areas of applications. • Students are able to describe the features of actual HPC systems and processors. They describe major underlying trends (power wall, Memory wall, ILP wall) of the systems. • Students name and describe General used classifications of parallel systems. They describe the important structure elements of Operation principles of parallel computer systems. They master the theoretical behavior of scaling (Amdahl, Gustafson) and quantitative Evaluations of parallel computers. • Students name and describe architectural characteristics of scalable shared memory systems. They master different techniques to maintain memory consistency and coherency in bus based systems (Invalidation protocols, update protocols). They describe technics to increase the Performance of These systems (Multi Level caches, transient states, split Transaction busses). • Students describe mechanisms to establish synchronizations (locks, barriers) in parallel systems. • Students demonstrate knowledge and understanding of in maintaining cache coherency within scalable computer systems (hierarchical snooping, directories). They master techniques to increase the performance of these systems (e.g. latency, throughput). • Students describe techniques based on token coherency. • Students name and describe fundamental features of the architectures of cluster systems. They are able to describe the topology of communication systems and metrics for evaluation (e.g. degree, diameter, bisection). They master communication techniques of high performance interconnect networks (e.g. wormhole Routing, virtual cut-through). They master techniques to proof are deadlock are avoided. • Students describe features of existing interconnects (InfiniBand, OmniPath). <p>Non-cognitive Skills</p> <ul style="list-style-type: none"> • Commitment • Learning competence

2	Options within the module: None						
3	Admission requirements: None <i>Prerequisites of course Integrierte Schaltungen für die drahtlose Kommunikation:</i> Recommended: Lecture Schaltungstechnik resp. Circuit and System Design. Helpful supplement: Lecture “Wireless Communications” of Prof. Hab-Umbach.						
4	Contents: <i>Contents of the course Integrierte Schaltungen für die drahtlose Kommunikation:</i> Short Description Mobile communications, wireless networks, and RFID technology are application examples of wireless communications. Wireless communications has found widespread use in everyday life and will become even more important in the future. The design of electronic circuits for radio frequencies requires a good system knowledge with respect to typical transmitter and receiver architectures in wireless communications, components, and radio signal properties. Furthermore a thorough understanding of integrated circuit design as well as precise high-frequency modeling of passive and active devices are required. Goal of the lecture is to convey a methodical approach to the design of integrated circuits for wireless communications. A part of the exercises will pertain to calculation of circuit design problems another will be performed in small teams as a hands-on exercise using modern IC design software. Contents The lecture deals with analysis and design of radio frequency integrated circuits for wireless communication systems. A part of the exercises will be performed using modern chip design CAD tools. The lecture is based on the compulsory lectures “Schaltungstechnik” resp. “Circuit and System Design”. The following topics will be addressed: <ul style="list-style-type: none"> • Transmitter and receiver architectures for wireless communications • System Theory Basics <ul style="list-style-type: none"> – Signals and noise – Modulation and demodulation – Transmission properties of wireless communications systems • Semiconductor technologies and integrated high-frequency devices • Amplifiers (low-noise and variable-gain amplifiers) • Mixers • Oscillators • Frequency synthesizer PLLs

4	<p>Contents:</p> <p><i>Contents of the course Schnelle integrierte Schaltungen für die leitungsgebundene Kommunikation:</i></p> <p>Short Description</p> <p>Nowadays commercial fiber-optic communication systems reach very high data rates of 100 Gb/s per optical channel and several Tb/s in a single fiber. In a similar way very high data rates of more than 10 Gb/s occur at a single package pin of electronic chips. These signals are to be transmitted over printed circuit boards and inexpensive serial cables. In the future the progress of CMOS technology and communication technology will push speed of fiber-optic and wire-line communication continuously to ever higher data rates. The design of electronic circuits for high bandwidth resp. data rates requires a good system knowledge with respect to typical transmitter and receiver architectures, components, and signal properties. Furthermore a thorough understanding of integrated circuit design as well as precise high-frequency modeling of passive and active devices are required. Goal of the lecture is to enable the student to utilize a methodological approach for the design of fast integrated electronic circuits for digital wired communications. A part of the exercises will be carried out using modern industry-standard IC design software.</p> <p>Contents</p> <p>The lecture deals with analysis and design of fast integrated electronic circuits for digital broadband communication systems. 	Short Description					
	The course "VLSI Testing" focuses on techniques for detecting hardware defects in micro-electronic circuits. Algorithms for test data generation and test response evaluation as well as hardware structures for design for test (DFT) and on-chip test implementation (BIST) are presented.					
	Contents					
	In detail the following topics are covered:					
	<ul style="list-style-type: none"> • Fault models • Testability measures and design for test (DFT) • Logic and fault simulation • Automatic test pattern generation (ATPG) • Built-in self-test (BIST), in particular test data compression and test response compaction • Memory test 					

3 Specialisation Area

5	<p>Learning outcomes and competences:</p> <p>Domain competence: After attending the course, the students will be able</p> <ul style="list-style-type: none"> • to describe fault models, DFT techniques, and test tools, • to explain and apply the underlying models and algorithms for fault simulation and test generation, • to analyze systems with respect to their testability and to derive appropriate test strategies. <p>Key qualifications: The students</p> <ul style="list-style-type: none"> • are able to apply the practiced strategies for problem solving across varying disciplines, • have experience in presenting their solutions to their fellow students, and • know how to improve their competences by private study.

4	<p>Contents:</p> <p><i>Contents of the course Advanced VLSI Design:</i></p> <p>Short Description The course provides basic knowledge about the modern application-oriented modeling, simulation, analysis, and synthesis of digital systems at different abstraction levels to chip layout.</p> <p>Contents In today's practice, chip design consists of the combined application of various languages, methods, and tools for the modeling, simulation, and synthesis of electronic circuits. Along the modern abstraction-based design flow of digital systems (electronic system level to chip layout), the course provides basic knowledge of the main description languages and their application in modeling, simulation, analysis and synthesis. This includes basic principles and application of the IEEE standard system/hardware description languages SystemVerilog, SystemC, Verilog, and VHDL, in conjunction with additional formats, e.g., SDF and UPF for time and power annotation. For their application, the fundamental principles of test environments for simulation, timing and power analysis, logic synthesis and physical design of digital circuits. Exercises will provide hands-on labs based on commercial tools from Mentor Graphics, Synopsys and, Cadence Design Systems.</p>								
5	<p>Learning outcomes and competences:</p> <p>Domain competence: After the course students are able</p> <ul style="list-style-type: none"> • to model, simulate, analyze and synthesize simple digital circuits at different abstraction levels and • to apply the most important commercial tools for simulation, analysis and synthesis of digital circuits. <p>Key qualifications: After the course students are able</p> <ul style="list-style-type: none"> • to assess, select and apply modern digital circuit description languages for their different applications, • apply the different methods and tools in the modern VLSI design.

2	Options within the module: None						
3	Admission requirements: Mandatory for WGBAET: Successful completion of the modules required under the study plan in semester 1 and 2. Other degree courses: None <i>Prerequisites of course Einführung in die Hochfrequenztechnik:</i> Recommended: Prior knowledge from the modules Higher Mathematics and Foundations of Electrical Engineering.						
4	Contents: <i>Contents of the course Einführung in die Hochfrequenztechnik:</i> Short Description The course Introduction to High-Frequency Engineering provides basic knowledge of high-frequency engineering in particular with respect to signal propagation along transmission lines on circuit boards and integrated circuits. This knowledge is prerequisite for the continuative courses High-Frequency Engineering, Optical Communication, and High-Frequency Electronics. Contents In the first part of the course Introduction to High-Frequency Engineering, an equivalent circuit together with primary transmission line parameter is introduced. The resulting telegraph equation is solved for various boundary conditions. In particular, stationary processes and lossless transmission lines are considered and the Smith diagram is introduced. The gained knowledge is used to dimension circuits comprising distributed and lumped components, in particular matching networks. In the second part, high-frequency aspects of circuit theory are covered. In particular, circuits comprising distributed and lumped elements are consistently described and classified by scattering parameters, and gain definitions are derived.						

3 Specialisation Area

5	<p>Learning outcomes and competences:</p> <p>Domain competence: After attending the course, the students will be able to</p> <ul style="list-style-type: none"> • describe circuits comprising distributed and lumped components, • to analyze, • and to design the latter. <p>Key qualifications: The students</p> <ul style="list-style-type: none"> • can use of methodic knowledge for systematic problem analysis, • get familiar with the CAD system ADS, which is commonly used in industry • and gain foreign language competences related to the field.

3	<p>Admission requirements:</p> <p>None</p> <p><i>Prerequisites of course Integrierte Schaltungen für die drahtlose Kommunikation:</i> Recommended: Lecture Schaltungstechnik resp. Circuit and System Design. Helpful supplement: Lecture “Wireless Communications” of Prof. Hab-Umbach.</p>
4	<p>Contents:</p> <p><i>Contents of the course Integrierte Schaltungen für die drahtlose Kommunikation:</i> Short Description Mobile communications, wireless networks, and RFID technology are application examples of wireless communications. Wireless communications has found widespread use in everyday life and will become even more important in the future. The design of electronic circuits for radio frequencies requires a good system knowledge with respect to typical transmitter and receiver architectures in wireless communications, components, and radio signal properties. Furthermore a thorough understanding of integrated circuit design as well as precise high-frequency modeling of passive and active devices are required. Goal of the lecture is to convey a methodical approach to the design of integrated circuits for wireless communications. A part of the exercises will pertain to calculation of circuit design problems another will be performed in small teams as a hands-on exercise using modern IC design software.</p> <p>Contents The lecture deals with analysis and design of radio frequency integrated circuits for wireless communication systems. A part of the exercises will be performed using modern chip design CAD tools. The lecture is based on the compulsory lectures “Schaltungstechnik” resp. “Circuit and System Design”. The following topics will be addressed:</p> <ul style="list-style-type: none"> • Transmitter and receiver architectures for wireless communications • System Theory Basics <ul style="list-style-type: none"> – Signals and noise – Modulation and demodulation – Transmission properties of wireless communications systems • Semiconductor technologies and integrated high-frequency devices • Amplifiers (low-noise and variable-gain amplifiers) • Mixers • Oscillators • Frequency synthesizer PLLs
5	<p>Learning outcomes and competences:</p> <p>The students will be able</p> <ul style="list-style-type: none"> • to describe architectures and circuits of wireless communication systems • to describe and calculate fundamental signal transmission properties of wireless systems • to apply design methods to design components of radio frequency ICs

4	Contents:						
	<i>Contents of the course Machine Learning I:</i>						
	Due to the ever increasing amount of data that is routinely produced in our information society, the topic of machine learning has become increasingly important in the recent years, not only as a scientific discipline but also as a key technology of modern software and intelligent systems. This lecture provides an introduction to the topic of machine learning, with a specific focus on supervised learning for classification and regression. The lecture covers theoretical foundations of generalisation as well as practical topics and concrete learning algorithms.						
	<ul style="list-style-type: none"> • Introduction • The Learning Problem • Training versus Testing • The Linear Model • Non-Linear Methods • Overfitting 						
5	Learning outcomes and competences:						
	The students understand the statistical foundations of generalisation, i.e., the induction of models from data, as well as practical tools for model validation. They are able to apply basic methods of supervised learning to problems of classification and regression.						
	Non-cognitive Skills						
	<ul style="list-style-type: none"> • Learning competence • Learning motivation • Literacy (scientific)

3 Specialisation Area

4	<p>Contents:</p> <p><i>Contents of the course Schnelle integrierte Schaltungen für die leitungsgebundene Kommunikation:</i></p> <p>Short Description</p> <p>Nowadays commercial fiber-optic communication systems reach very high data rates of 100 Gb/s per optical channel and several Tb/s in a single fiber. In a similar way very high data rates of more than 10 Gb/s occur at a single package pin of electronic chips. These signals are to be transmitted over printed circuit boards and inexpensive serial cables. In the future the progress of CMOS technology and communication technology will push speed of fiber-optic and wire-line communication continuously to ever higher data rates. The design of electronic circuits for high bandwidth resp. data rates requires a good system knowledge with respect to typical transmitter and receiver architectures, components, and signal properties. Furthermore a thorough understanding of integrated circuit design as well as precise high-frequency modeling of passive and active devices are required. Goal of the lecture is to enable the student to utilize a methodological approach for the design of fast integrated electronic circuits for digital wired communications. A part of the exercises will be carried out using modern industry-standard IC design software.</p> <p>Contents</p> <p>The lecture deals with analysis and design of fast integrated electronic circuits for digital broadband communication systems. A part of the exercises will be performed using modern chip design CAD tools. The lecture is based on the compulsory lectures "Schaltungstechnik" resp. "Circuit and System Design". The lecture deals with:</p> <ul style="list-style-type: none">• Transmitter and receiver architectures for fiber-optic communications• Transmitter and receiver architectures for chip-to-chip communications• System design• Semiconductor technology and integrated high-frequency devices• Broadband amplifiers• Current-mode logic• Transmitter and receiver circuits• PLLs for frequency synthesis and clock recovery• Measurement methods
5	<p>Learning outcomes and competences:</p> <p>Domain competence:</p> <p>The student will be able to:</p> <ul style="list-style-type: none">• describe and analyze transmitter and receiver architectures for broadband communication links• understand and describe semiconductor technologies and integrated high-frequency devices for broadband circuits• to analyze circuit design techniques for transmitter and receiver circuits and describe ways to optimize them• to describe circuits in PLL technique for frequency synthesis and clock recovery• to describe measurement methods <p>Key qualifications:</p> <p>The students will learn how different interdisciplinary scientific domains and their methods - like mathematical signal and system analysis, non-linear and linear circuit analysis, semiconductor physics, semiconductor devices and high-frequency engineering - are applied together for the development of communications application.</p>

2	Options within the module: None						

3 Specialisation Area

3	<p>Admission requirements:</p> <p>None</p> <p><i>Prerequisites of course Advanced System Theory:</i></p> <p>Recommended:</p> <p>Prerequisites are a basic understanding of differential equations, linear algebra, and Laplace transforms, as they are covered in a typical undergraduate course on system theory.</p>								
4	<p>Contents:</p> <p><i>Contents of the course Advanced System Theory:</i></p> <p>Short Description</p> <p>Building on an undergraduate system theory course, this course studies the dynamical behavior of linear systems with greater mathematical rigor. The course is primarily intended to serve students in engineering, but it can also be useful to students in physics and other natural sciences.</p> <p>Contents</p> <ul style="list-style-type: none"> • System models and differential equations • State-space and I/O descriptions • Relations between internal and external descriptions • Response of continuous- and discrete-time systems • Stability, controllability, observability • State-space realizations of external descriptions • Feedback systems 								
5	<p>Learning outcomes and competences:</p> <p>After attending this course, students will be familiar with the most important concepts and results in linear system theory. Students will develop confidence in their ability to solve mathematical problems of analysis and design. Many of their timeless insights and intuitions about the dynamical behavior of systems will be drawn from this course. This course presents material broad enough so that students will have a clear understanding of the dynamical behavior of linear systems, including their power and limitations. This will allow students to apply the theory to other fields.</p>

4	<p>Contents:</p> <p><i>Contents of the course Digital Image Processing II:</i></p> <p>Short Description The course “Digital Image Processing II” is a module in the catalog “Cognitive Systems” for advanced students of the Electrical Engineering Master’s program and related degree programs. It follows the fundamental course “Digital Image Processing I” and covers methods for high-level image processing.</p> <p>Contents The following topics will be discussed during the semester:</p> <ul style="list-style-type: none"> • Image segmentation (line and edge detection, segmentation by region, superpixels) • Feature extraction (feature descriptors, principal components, Scale-Invariant-Feature-Transform (SIFT)) • Stereo image analysis (depth perception, stereo geometry, correspondence problem) • Motion (motion detection, optical flow, motion models, motion segmentation) • Object recognition and image pattern classification (patterns, classifiers, neural networks and deep learning, convolutional neural networks (CNN)) <p>After learning about the methods in the lecture, the students will implement them in Jupyter Notebooks.</p>
5	<p>Learning outcomes and competences:</p> <p>Domain competence: The students</p> <ul style="list-style-type: none"> • can apply methods for image segmentation, representation and description of features, stereo and motion image analysis, objection recognition and machine learning, • are able to transfer the acquired knowledge of image processing to the processing of other multi-dimensional signals, • are able to describe the state-of-the-art of the presented topics, and • are able to implement the presented methods. <p>Key qualifications: The students are able to identify and evaluate the function and the behavior of complex technical processes and their integration into the social environment while also considering ethical aspects.</p>

3	Admission requirements: None <i>Prerequisites of course Digitale Sprachsignalverarbeitung:</i> Recommended: Prior knowledge from the module Higher Mathematics.					

3 Specialisation Area

4	<p>Contents:</p> <p><i>Contents of the course Digitale Sprachsignalverarbeitung:</i></p> <p>Short Description</p> <p>The course introduces the basic techniques and theories of digital speech signal processing. A focal point of the first part of the lecture is the topic “Listening and Speaking”, which is concerned with psychological effects of human sound perception and speech production. Subsequently, time discrete signals and systems, as well as computer based data processing are discussed. Further topics are non-parametric short-time analysis of speech signals, speech coding and IP-phones.</p> <p>Contents</p> <ul style="list-style-type: none">• Listen and talk• Generating voice: human vocal tract, source filter model, vocoder• Acoustic waves• Listen: human ear, psycho acoustics and physiology of listening, loudness, acoustic occlusion, frequency groups• Time-discrete signals and systems• Basics: Elementary signals, LTI systems• Transformations: Fourier transformation of time-discrete signals, DFT, FFT• Time-discrete filtering in frequency domain: Overlap-Add, overlap-Save• Statistical speech signal analysis• Basics in theory of probabilities• Short-run analysis of speech signals: Spectrogram, cepstrum• Estimation of speech signals• Optimal filters• LPC analysis• Spectral filtering for noise suppression: spectral subtraction, Wiener filter• Adaptive Filters: LMS adaptation algorithm, echo compensation• Speech coding• Time domain coding: signal shape coding, parametric coding, hybride coding techniques• Frequency domain coding• Amplitude quantization: uniform quantization, quantization with companders (ulaw, alaw)
5	<p>Learning outcomes and competences:</p> <p>Domain competence:</p> <p>After attending the course, the students will be able to</p> <ul style="list-style-type: none">• analyze digital signals, e.g., audio signals, in the time or frequency domain,• represent audio signals efficiently and• implement widely-used algorithms for speech analysis and speech processing in the frequency or time domain. <p>Key qualifications:</p> <p>The students</p> <ul style="list-style-type: none">• are able to explain effects in real signals based on the theoretical knowledge,• are able to investigate theoretical approaches by a systematic analysis and• are, due to the precise treatment of the contents, in a position to continue their learning themselves

4	<p>Contents:</p> <p><i>Contents of the course Messstochastik:</i></p> <p>Short description</p> <p>In many areas of technology, randomly fluctuating (stochastic) variables occur, the course of which cannot be specified by formula. Such random temperature, pressure or voltage fluctuations can be disturbances, but also useful signals. Their treatment requires statistical methods, such as spectral analysis or correlation methods. The errors occurring during their realization with respect to measurement time and amplitude quantization are dealt with. The practical use of statistical methods in the field of communication and automation technology is demonstrated. Lecture-accompanying Matlab® and laboratory practical exercises help to deepen the material.</p> <p>Contents</p> <p>The lecture Measurement Stochastics covers the following topics:</p> <ul style="list-style-type: none"> • Fundamentals of measurement stochastics. • Stochastic processes in nonlinear systems • Devices of measurement stochastics • Problems of finite measurement time • Applications: Signal detection in noise, word recognition by partial autocorrelation, system identification, flame monitoring, localization, leak detection in pipes, separation of stochastic sum processes, time-of-flight and velocity measurement in rigid and turbulent as well as stationary and unsteady motion processes, rehocence and cepstrum methods, sensors for correlative velocity measurement, FTIR spectrometer as optical correlator. 								
5	<p>Learning outcomes and competences:</p> <p>Specialized competence:</p> <p>After attending the course, students are able to,</p> <ul style="list-style-type: none"> • analyze and evaluate complex measurement tasks with stochastically varying quantities and develop their own solutions, • evaluate algorithms with respect to computational efficiency, effectiveness, error estimation, and limitations. <p>Cross-disciplinary competencies:</p> <p>The students</p> <ul style="list-style-type: none"> • can apply the acquired knowledge across disciplines to complex problems, • are able to develop targeted solutions based on a systematic problem analysis, • are methodically able to familiarize themselves with comparable fields of work.

	<i>Prerequisites of course Schnelle integrierte Schaltungen für die leitungsgebundene Kommunikation:</i>						
	Recommended: Module "Schaltungstechnik" of the Bachelor Electrical Engineering or module "Circuit and System Design" of the Master "Electrical Systems Engineering" or comparable modules / lectures						

3 Specialisation Area

4	<p>Contents:</p> <p><i>Contents of the course Schnelle integrierte Schaltungen für die leitungsgebundene Kommunikation:</i></p> <p>Short Description</p> <p>Nowadays commercial fiber-optic communication systems reach very high data rates of 100 Gb/s per optical channel and several Tb/s in a single fiber. In a similar way very high data rates of more than 10 Gb/s occur at a single package pin of electronic chips. These signals are to be transmitted over printed circuit boards and inexpensive serial cables. In the future the progress of CMOS technology and communication technology will push speed of fiber-optic and wire-line communication continuously to ever higher data rates. The design of electronic circuits for high bandwidth resp. data rates requires a good system knowledge with respect to typical transmitter and receiver architectures, components, and signal properties. Furthermore a thorough understanding of integrated circuit design as well as precise high-frequency modeling of passive and active devices are required. Goal of the lecture is to enable the student to utilize a methodological approach for the design of fast integrated electronic circuits for digital wired communications. A part of the exercises will be carried out using modern industry-standard IC design software.</p> <p>Contents</p> <p>The lecture deals with analysis and design of fast integrated electronic circuits for digital broadband communication systems. A part of the exercises will be performed using modern chip design CAD tools. The lecture is based on the compulsory lectures "Schaltungstechnik" resp. "Circuit and System Design". The lecture deals with:</p> <ul style="list-style-type: none">• Transmitter and receiver architectures for fiber-optic communications• Transmitter and receiver architectures for chip-to-chip communications• System design• Semiconductor technology and integrated high-frequency devices• Broadband amplifiers• Current-mode logic• Transmitter and receiver circuits• PLLs for frequency synthesis and clock recovery• Measurement methods
5	<p>Learning outcomes and competences:</p> <p>Domain competence:</p> <p>The student will be able to:</p> <ul style="list-style-type: none">• describe and analyze transmitter and receiver architectures for broadband communication links• understand and describe semiconductor technologies and integrated high-frequency devices for broadband circuits• to analyze circuit design techniques for transmitter and receiver circuits and describe ways to optimize them• to describe circuits in PLL technique for frequency synthesis and clock recovery• to describe measurement methods <p>Key qualifications:</p> <p>The students will learn how different interdisciplinary scientific domains and their methods - like mathematical signal and system analysis, non-linear and linear circuit analysis, semiconductor physics, semiconductor devices and high-frequency engineering - are applied together for the development of communications application.</p>

Module number: M.048.23012	Workload (h): 180	Credits: 6	Regular Cycle: summer term			
	Semester number: 1.-3. Semester	Duration (in sem.): 1	Teaching Language: en			
1	Module structure:					
	Course	form of teaching	contact-time (h)	self-study (h)	status (C/CE)	group size (TN)
	a) L.048.23012 Statistical and Machine Learning	2L 2Ex, SS	60	120	C	40/40
2	Options within the module: None					
3	Admission requirements: None <i>Prerequisites of course Statistical and Machine Learning:</i> Recommended: Elementary knowledge in probability theory, as is taught in the course Statistical Signal Processing. Basic programming skills are desirable.					
4	Contents: <i>Contents of the course Statistical and Machine Learning:</i> Short Description The course on Statistical and Machine Learning presents an introduction into the components and algorithms prevalent in statistical and machine learning. Modern techniques will be presented for gleaning information from data. Both supervised and unsupervised learning algorithms will be discussed. The presented techniques can be applied to a variety of classification and regression problems, both for one-dimensional input data (e.g., speech), two-dimensional (e.g., image) or symbolic input data (e.g., documents). Contents <i>Introduction to classification problems, Bayesian and other decision rules Optimization: gradient descent, algorithmic differentiation, optimization with constraints Linear classifiers, Support Vector Machines Deep neural networks (deep learning) Dimensionality reduction (PCA, LDA) Unsupervised learning (mixture densities, clustering techniques)</i>					

3 Specialisation Area

5	<p>Learning outcomes and competences:</p> <p>Domain competence: After completion of the module students will be able to</p> <ul style="list-style-type: none"> • Find an appropriate approach to solving a given classification or regression problem • Apply supervised or unsupervised learning techniques to data of various kinds and critically assess the outcome of the learning algorithms • Can appreciate the power and limitations of machine learning algorithms • Work with software for solving machine learning problems and write own software components, apply them to given data sets and optimize parameter settings • Find, for a given training set size, an appropriate choice of classifier complexity und feature vector dimensionality <p>Key qualifications: The students</p> <ul style="list-style-type: none"> • Have gathered sufficient proficiency in Python, which is valuable well beyond this course • Can assess the importance of the principle of parsimony and are able to transfer it to other • Are able to analyse a given classification or regression problem, synthesize a solution, and evaluate the performance on test data • Are able to apply the knowledge and skills learnt in this course to a wide range of disciplines • Can work cooperatively in a team and subdivide an overall task into manageable subtasks and work packages • Acquired a general understanding of the power and limitations of machine learning algorithms

3	Admission requirements:						
	None						
	<i>Prerequisites of course Technische kognitive Systeme - Ausgewählte Kapitel:</i>						
	Recommended: Interest in the subject-matter and interdisciplinary work.						

3 Specialisation Area

4	<p>Contents:</p> <p>This module is offered in three parts. Students have to choose two out of three. Each part lasts two hours per week and yields three credits.</p> <p><i>Contents of the course Technische kognitive Systeme - Ausgewählte Kapitel:</i></p> <p>Part A</p> <p>At any given time, the sensory receptors of living beings are exposed to a very large amount of information, of which only a small proportion can be consciously processed. Visual attention is understood as the pooling of available cognitive resources for optimal processing of visual stimuli. The seminar introduces the modeling and experimental investigation of visual attention and the transfer to intelligent technical systems. It will be shown how research can be conducted jointly across disciplinary boundaries. The current focus is on the topic of saliency. The course always takes place in the winter semester.</p> <p>Part B</p> <p>While “sensation” describes the signals from the physical world that reach our sensory receptors, “perception” refers to the processes by which our brain selects, organizes, and interprets the signals. This seminar provides students in technical courses with an overview of the fundamentals of biological sensory systems and perception. In addition to the exciting and (sometimes non-intuitive) background of these topics, there will be a critical discussion of the transferability of biological concepts and mechanisms to technical systems. This seminar is always in the summer semester.</p> <p>Part C</p> <p>In this seminar, current interim reports and results from ongoing bachelor’s and master’s theses, research projects, and third-party funded projects from the GETLab - Technical Cognitive Systems department will be presented. Furthermore, there will be presentations by guests of the research group. The seminar is offered in the summer and winter semester.</p>
5	<p>Learning outcomes and competences:</p> <p>Domain competence: The students</p> <ul style="list-style-type: none">• are able to name basic research topics related to the design and the implementation of technical cognitive systems,• can apply and evaluate technical cognitive systems, and• are able to understand, design, implement and evaluate basic psychophysical experiments. <p>Key qualifications: The students</p> <ul style="list-style-type: none">• are able to research and evaluate technical literature,• have developed an understanding of the discipline-related research approaches (computer science, electrical engineering, psychology) and• are able to carefully consider the potential use of bio-inspired mechanisms in technical systems.

	a) L.048.92035 Wireless Communications	2L 2Ex, SS	60	120	C	30/30
2	Options within the module:					
	None					
3	Admission requirements:					
	None					
	<i>Prerequisites of course Wireless Communications:</i>					
	Recommended: Some basic knowledge in digital communication systems.					

3 Specialisation Area

4	<p>Contents:</p> <p><i>Contents of the course Wireless Communications:</i></p> <p>The course provides students with an insight into the techniques for reliable communication via time and/or frequency selective radio channels. To this end, the physical and statistical modeling of the radio channel is first presented, which forms the basis for understanding the transmission methods adapted to these channel conditions. Then, the main transmission and reception principles are presented, in particular the different diversity schemes:</p> <ul style="list-style-type: none">• Time diversity: maximum ratio combiner, error rate calculation for coherent and incoherent reception, interleaving.• Antenna diversity: SIMO, MISO and MIMO techniques• Frequency diversity for frequency selective channels: Single-carrier techniques with sequence detection, band-spreading techniques, multicarrier transmission. <p>Emphasis will be placed on an illustrative derivation of the receiver principles as operations in a linear vector space. In addition, an insight into current cellular radio communication systems is given.</p> <p>Table of contents</p> <ul style="list-style-type: none">• Pulse amplitude modulation and orthogonal multi-pulse modulation• Optimal detection• Channel models for mobile radio• Treatment of intersymbol interference• Error rate on frequency nonselective Rayleigh Fading channel• Diversity schemes: time, space, and frequency diversity• Channel coding• Cellular systems
---	---

3 Specialisation Area

5	<p>Learning outcomes and competences:</p> <p>Domain competence: After completion of the course students will be able to</p> <ul style="list-style-type: none"> • Develop a discrete-time statistical channel model for a given physical description of a wireless communication channel • Explain the techniques and algorithms used in the Physical Layer of a wireless communication system • Understand the fundamental design options and decisions taken to realize reliable communication over time variant and frequency selective or nonselective fading channel • Appreciate and categorize the techniques used in modern cellular communication systems to realize reliable communication • Trade off the advantages and disadvantages of different transmission techniques with respect to bandwidth and power efficiency as well as number of users to be served • Select and design an appropriate transmission technique for a wireless channel • Simulate and analyze simple communication systems using modern software tools <p>Key qualifications: The students</p> <ul style="list-style-type: none"> • Can transfer and apply the concept of linear vector spaces to signal processing tasks other than for wireless communications • Can apply the skills about the generation of data, simulation of systems and analysis of experimental results using modern software tools, that have been acquired in this course, to other disciplines • Can work cooperatively in a team and subdivide an overall task into manageable subtasks and work packages 								
6	<p>Assessments:</p> <p> <input checked="" type="checkbox"/> Final module exam (MAP) <input type="checkbox"/> Module exam (MP) <input type="checkbox"/> Partial module exams (MTP) </p> <table border="1" style="width: 100%; border-collapse: collapse; margin-top: 5px;"> <thead> <tr> <th style="width: 10%; text-align: center;">zu</th> <th style="width: 45%; text-align: center;">Type of examination</th> <th style="width: 20%; text-align: center;">Duration or scope</th> <th style="width: 25%; text-align: center;">Weighting for the module grade</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">a)</td> <td>Written or Oral Examination or Presentation</td> <td>120-180 min or 30-45 min or 30 min</td> <td style="text-align: center;">100%</td> </tr> </tbody> </table>	zu	Type of examination	Duration or scope	Weighting for the module grade	a)	Written or Oral Examination or Presentation	120-180 min or 30-45 min or 30 min	100%
zu	Type of examination	Duration or scope	Weighting for the module grade						
a)	Written or Oral Examination or Presentation	120-180 min or 30-45 min or 30 min	100%						
7	<p>Study Achievement:</p> <p>none</p>								
8	<p>Prerequisites for participation in examinations:</p> <p>None</p>								
9	<p>Prerequisites for assigning credits:</p> <p>The credit points are awarded after the module examination (MAP) was passed.</p>								
10	<p>Weighing for overall grade:</p> <p>The module is weighted according to the number of credits (factor 1).</p>								

3 Specialisation Area

11	Reuse in degree courses or degree course versions : Masterstudiengang Computer Engineering v3 (CEMA v3), Masterstudiengang Computer Engineering v4 (CEMA v4), Masterstudiengang Electrical Systems Engineering v3 (ESEMA v3) - Amtssprache, Master's Program Electrical Systems Engineering (ESEMA v2)
12	Module coordinator: Prof. Dr. Reinhold Häb-Umbach
13	Other Notes: <i>Remarks of course Wireless Communications:</i> Course Homepage https://ei.uni-paderborn.de/en/nt/teaching/veranstaltungen/wireless-communications Course script and summary slides are provided to the students. Exercises and solutions to exercises, as well as sample implementations of algorithms are provided to the students <ul style="list-style-type: none">• Häb-Umbach, Reinhold: Wireless Communications (Lecture notes)• D. Tse: Fundamentals of Wireless Communications, Cambridge University Press, 2006• K.D. Kammeyer: Nachrichtenuübertragung, Teubner, 2004• P. Höher: Grundlagen der digitalen Informationsübertragung, Springer/Vieweg 2013

4 Master's Thesis

Abschlussarbeit						
Master's Project						
Module number: A.048.17001	Workload (h): 900	Credits: 30	Regular Cycle: summer- / winter term			
	Semester number: 4. Semester	Duration (in sem.): 1	Teaching Language: de / en			
1	Module structure:					
	Course	form of teaching	contact-time (h)	self-study (h)	status (C/CE)	group size (TN)
	a) Working Plan (CEMA)		15	135	C	
	b) Master Thesis (CE)		30	720	C	
2	Options within the module: None					
3	Admission requirements: <i>Prerequisites of course Arbeitsplan (CEMA):</i> Recommended: Depending on the chosen topic, knowledge from the chosen specialization module. <i>Prerequisites of course Masterarbeit (CE):</i> Recommended: Depending on the topic chosen, knowledge of the chosen area of specialization.					
4	Contents:					
5	Learning outcomes and competences: -

6	Assessments: <input checked="" type="checkbox"/> Final module exam (MAP) <input type="checkbox"/> Module exam (MP) <input type="checkbox"/> Partial module exams (MTP)			
	zu	Type of examination	Duration or scope	Weighting for the module grade
	a) - b)			100%
7	Study Achievement:			
	zu	Type of achievement	Duration or Scope	SL / QT
	a)	Working Plan	150h	QP
	b)			
8	Prerequisites for participation in examinations: None			
9	Prerequisites for assigning credits: none			
10	Weighing for overall grade:			
11	Reuse in degree courses or degree course versions : Masterstudiengang Computer Engineering v3 (CEMA v3)			
12	Module coordinator: Dr.-Ing. Carsten Balewski			
13	Other Notes: none			

5 Overview of the modules offered in the winter semester

• A.048.17001 Abschlussarbeit	187
• M.048.11004 Einführung in die Hochfrequenztechnik	129
• M.048.22010 Umweltmesstechnik	96
• M.048.24010 Optimale und Adaptive Filter	161
• M.048.25019 Schnelle integrierte Schaltungen für die leitungsgebundene Kommunikation .	165
• M.048.27026 Systemidentifikation	91
• M.048.27029 Data Science for Dynamical Systems	77
• M.048.43019 Technische kognitive Systeme	172
• M.048.45001 Pflichtmodul Elektrotechnik I	8
• M.048.45002 Pflichtmodul Elektrotechnik II	11
• M.048.92001 Advanced System Theory	145
• M.048.92002 High Frequency Engineering	132
• M.048.92006 Advanced Topics in Robotics	75
• M.048.92007 Algorithms and Tools for Test and Diagnosis of Systems on a Chip	127
• M.048.92008 Digital Image Processing I	147
• M.048.92014 Topics in Signal Processing	181
• M.048.92021 Optical Communication C	34
• M.048.92027 VLSI-Testing	141
• M.048.92030 Topics in Pattern Recognition and Machine Learning	177
• M.079.01251 Pflichtmodul Informatik I	4
• M.079.01252 Pflichtmodul Informatik II	6
• M.079.01256 Advanced Distributed Algorithms and Data Structures	20
• M.079.01260 Databases and Information Systems	56
• M.079.01270 Reconfigurable Computing	113
• M.079.01274 Machine Learning I	154
• M.079.01279 Introduction to Quantum Computation	59
• M.079.01281 Statistical Natural Language Processing	170
• M.079.01286 Real World Crypto Engineering	40

6 Overview of the modules offered in the summer semester

• A.048.17001 Abschlussarbeit	187
• M.048.22008 Messstochastik	159
• M.048.23012 Statistical and Machine Learning	167
• M.048.23021 Topics in Audio, Speech and Language Processing	175
• M.048.24001 Digitale Sprachsignalverarbeitung	151
• M.048.25017 Integrierte Schaltungen für die drahtlose Kommunikation	134
• M.048.27013 Geregelte Drehstromantriebe	82
• M.048.27015 Ultraschallmesstechnik	93
• M.048.27028 Gekoppelte Felder	80
• M.048.42941 Wissenschaftliches Arbeiten	16
• M.048.92007 Algorithms and Tools for Test and Diagnosis of Systems on a Chip	127
• M.048.92010 Digital Image Processing II	149
• M.048.92012 Robotics	89
• M.048.92019 Optical Communication A	29
• M.048.92020 Optical Communication B	32
• M.048.92035 Wireless Communications	183
• M.048.92037 Advanced Control	71
• M.048.92043 Advanced VLSI Design	125
• M.048.92045 Reinforcement Learning	86
• M.079.01254 Projektgruppe	14
• M.079.01258 Architektur paralleler Rechnersysteme	103
• M.079.01262 Foundations of Cryptography	22
• M.079.01271 Routing and Data Management in Networks	42
• M.079.01272 Software Quality Assurance	118
• M.079.01275 Machine Learning II	156
• M.079.01277 Model-Based Systems Engineering	111
• M.079.01284 Web Security	48
• M.079.01285 Usable Security and Privacy	65

7 Overview of module offerings in English

• A.048.17001 Master's Project	187
• M.048.11005 Semiconductor Device Integration	??
• M.048.23012 Statistical and Machine Learning	167
• M.048.23021 Topics in Audio, Speech and Language Processing	175
• M.048.24001 Digital Speech Signal Processing	151
• M.048.24010 Optimal and Adaptive Filters	161
• M.048.25017 Integrated Circuits for Wireless Communications	134
• M.048.25019 Fast Integrated Circuits for Wireline Communications	165
• M.048.27013 Controlled AC Drives	82
• M.048.27029 Data Science for Dynamical Systems	77
• M.048.43019 Cognitive Systems Engineering	172
• M.048.45001 Compulsory Module Electrical Engineering I	8
• M.048.45002 Compulsory Module Electrical Engineering II	11
• M.048.92001 Advanced System Theory	145
• M.048.92002 High Frequency Engineering	132
• M.048.92006 Advanced Topics in Robotics	75
• M.048.92007 Algorithms and Tools for Test and Diagnosis of Systems on a Chip	127
• M.048.92008 Digital Image Processing I	147
• M.048.92010 Digital Image Processing II	149
• M.048.92012 Robotics	89
• M.048.92014 Topics in Signal Processing	181
• M.048.92019 Optical Communication A	29
• M.048.92020 Optical Communication B	32
• M.048.92021 Optical Communication C	34
• M.048.92027 VLSI-Testing	141
• M.048.92030 Topics in Pattern Recognition and Machine Learning	177
• M.048.92035 Wireless Communications	183
• M.048.92037 Advanced Control	71
• M.048.92043 Advanced VLSI Design	125
• M.048.92045 Reinforcement Learning	86
• M.079.01251 Computer Science I	4
• M.079.01252 Computer Science II	6
• M.079.01254 Project Group	14
• M.079.01256 Advanced Distributed Algorithms and Data Structures	20
• M.079.01260 Databases and Information Systems	56
• M.079.01262 Foundations of Cryptography	22
• M.079.01270 Reconfigurable Computing	113
• M.079.01271 Routing and Data Management in Networks	42
• M.079.01272 Software Quality Assurance	118
• M.079.01274 Machine Learning I	154

7 Overview of module offerings in English

• M.079.01275 Machine Learning II	156
• M.079.01277 Model-Based Systems Engineering	111
• M.079.01279 Introduction to Quantum Computation	59
• M.079.01281 Statistical Natural Language Processing	170
• M.079.01285 Usable Security and Privacy	65
